A CRM APPLICATION FOR THECHAISHOP&CO

ABSTRACT

Customer Relationship Management, commonly known as CRM, is an important technology used by businesses to manage their interactions with customers. The proposed project, “A CRM APPLICATION FOR THECHAISHOP&CO,” is designed to provide a centralized system for managing customer-related activities.

The application can maintain customer details, product information, orders, sales records, feedback, and customer service information in an organized manner. Instead of depending completely on manual records, the proposed CRM system provides a digital platform for storing and retrieving business information.

The system allows authorized users to add new customers, update customer information, manage products, process orders, monitor sales, and generate useful reports. Customer feedback can also be recorded and analyzed to understand customer requirements.

The main purpose of this project is to improve customer service, reduce manual work, maintain accurate records, and support better business management. The CRM application can help TheChaiShop&Co maintain long-term customer relationships through organized customer information and efficient service.

INTRODUCTION

In the modern business environment, maintaining good relationships with customers is important for the growth of an organization. Customers expect quick service, accurate information, personalized communication, and convenient purchasing experiences.

TheChaiShop&Co can use a CRM application to manage its customer-related activities through a centralized digital system. CRM software combines customer information and business activities into one platform.

The proposed application provides facilities for customer management, product management, order management, sales tracking, feedback management, and report generation.

The system reduces the dependency on paper records and separate files. It provides faster access to customer information and helps employees perform their daily activities efficiently.

A well-designed CRM application can also help management understand customer preferences and business performance.

ABOUT THECHAISHOP&CO

TheChaiShop&Co is considered as a tea and beverage-oriented business for the purpose of this project. The business may offer different varieties of tea, coffee, snacks, and other related products.

As the number of customers and orders increases, maintaining customer and sales information manually can become difficult. A CRM application provides a systematic solution for managing this information.

The application can maintain customer profiles, product details, order information, payment records, feedback, and sales reports.

The main purpose of introducing CRM into TheChaiShop&Co is to create an organized digital environment where customer information and business activities can be managed efficiently.

PROBLEM STATEMENT

Traditional business management methods often depend on notebooks, spreadsheets, paper bills, and separate records. These methods can create difficulties when the amount of information increases.

TheChaiShop&Co may need to manage a large number of customers, products, orders, and feedback records. Searching for a particular customer or previous order manually can consume time.

Important customer information may also be difficult to update and maintain consistently. Manual records can result in duplicate information or data entry errors.

Therefore, there is a need for a centralized CRM application that can store customer and business information systematically and provide quick access to required data.

NEED FOR CUSTOMER RELATIONSHIP MANAGEMENT

CRM is useful for businesses that want to organize their customer information and improve customer service.

TheChaiShop&Co can use CRM to maintain customer profiles and track interactions with customers. The system can store previous orders and feedback so that employees can understand customer requirements more effectively.

CRM also reduces repetitive manual work. Employees can search for information quickly instead of checking multiple records.

The system can generate reports that help management understand sales performance and customer activity.

Major Needs

Centralized customer database

Faster information retrieval

Better customer service

Order history management

Feedback tracking

Sales monitoring

Report generation

Reduced paperwork

OBJECTIVES

The main objective of this project is to develop a CRM application for managing the customer and business activities of TheChaiShop&Co.

Specific Objectives

To maintain customer information digitally.

To manage product and menu details.

To record and track customer orders.

To maintain customer order history.

To record customer feedback.

To monitor sales information.

To generate useful business reports.

To reduce manual data management.

To improve customer service.

To provide secure access to business information.

SCOPE OF THE PROJECT

The scope of the CRM application includes different activities related to customer and business management.

The system can be used by authorized staff members to maintain customer information and process business activities. It can store customer details, product information, orders, sales, and feedback.

The application can also provide a dashboard where important business information can be displayed.

Future Scope

The application can later be extended with:

Online ordering

Mobile application

Online payment integration

Customer notifications

Loyalty programs

AI-based recommendations

Sales forecasting

Cloud database

Advanced analytics

EXISTING SYSTEM

In a traditional system, customer and business information may be maintained manually using notebooks, paper files, spreadsheets, or separate applications.

Customer details are recorded manually, and employees may need to search through multiple records to find previous transactions.

Product information and sales records may also be maintained separately. Customer feedback may not always be stored systematically.

This type of system becomes difficult to manage when the business grows and the number of customers and orders increases.

LIMITATIONS

The existing manual system has several limitations.

Large amount of paperwork

Time-consuming data searching

Difficulty in updating records

Possibility of duplicate records

Data entry errors

Difficult customer history tracking

Limited reporting facilities

Difficulty in maintaining feedback

Less centralized information

Higher dependency on manual work

These limitations create a need for an integrated CRM application.

PROPOSED SYSTEM

The proposed system is a centralized CRM application designed for TheChaiShop&Co.

The application stores customer, product, order, sales, and feedback information in a structured database.

Authorized users can log into the system and perform activities according to their access permissions.

The system provides a dashboard for viewing important information and generates reports for business analysis.

The proposed system helps reduce manual work and provides faster access to business information.

ADVANTAGES

The proposed CRM application provides several advantages:

Centralized Data – All important customer information can be stored in one system.

Quick Access – Customer and order information can be retrieved quickly.

Reduced Paperwork – Digital records reduce dependency on physical documents.

Better Customer Service – Customer history can be accessed easily.

Improved Accuracy – Structured data entry reduces errors.

Better Reporting – Sales and customer reports can be generated.

Data Security – Login and access controls can protect information.

Easy Management – Business activities can be managed systematically.

SYSTEM REQUIREMENTS

The CRM application requires suitable hardware and software for development and operation.

Hardware Requirements

Computer or laptop

Minimum 4 GB RAM

Dual-core processor or higher

20 GB available storage

Keyboard and mouse

Internet connection when required

Software Requirements

Windows/Linux operating system

HTML

CSS

JavaScript

Python

Flask

MySQL or SQLite

Visual Studio Code

Web browser

HARDWARE REQUIREMENTS

Hardware provides the physical environment required to develop and operate the CRM application.

A computer or laptop with sufficient processing power can be used for development. RAM is required for running the development environment, database, and web browser simultaneously.

Storage is required for application files, source code, database records, reports, and backups.

Recommended Configuration

Component

Requirement

Processor

Dual Core or Higher

RAM

4 GB or Higher

Storage

20 GB Free Space

Display

Standard Monitor

Input

Keyboard and Mouse

Network

Internet Connection

SOFTWARE REQUIREMENTS

The software environment provides the tools required to develop and run the CRM application.

Frontend: HTML, CSS, JavaScript

Backend: Python with Flask

Database: MySQL / SQLite

Development Tool: Visual Studio Code

Browser: Google Chrome, Microsoft Edge, or another modern browser.

HTML is used to create the structure of web pages. CSS is used for design and layout. JavaScript provides interactive functionality.

Python and Flask can be used to implement server-side application logic, while the database stores customer and business information.

SYSTEM ARCHITECTURE

The CRM system can follow a three-layer architecture.

Presentation Layer:

Provides the user interface through which employees interact with the application.

Application Layer:

Processes user requests, performs business logic, validates information, and communicates with the database.

Database Layer:

Stores customer, product, order, sales, and feedback information.

Architecture Flow

User → Web Interface → Flask Application → Database → Response

This architecture separates the user interface, application logic, and data storage components.

CRM WORKFLOW

The CRM workflow explains how information moves through the application.

User opens the CRM application.

User enters login credentials.

System verifies the credentials.

Dashboard is displayed.

User selects the required module.

Customer/product/order information is entered.

Application validates the information.

Data is stored in the database.

Reports can be generated when required.

User logs out after completing the work.

SYSTEM MODULES

The proposed CRM application consists of several modules.

Main Modules

Login and Authentication

Customer Management

Product Management

Order Management

Sales Management

Feedback Management

Customer Support

Report Management

Dashboard

Database Management

Each module performs a specific function and together they form the complete CRM system.

LOGIN AND AUTHENTICATION

The login module provides controlled access to the CRM application.

Users enter their username and password to access the system. The application verifies the credentials against the stored authentication information.

Authentication prevents unauthorized users from accessing business information.

The system can also provide different access levels for administrators and staff members.

Functions

User login

Password verification

Session management

Logout

Role-based access

Account secure

CUSTOMER MANAGEMENT

Customer Management is one of the main modules of the CRM application.

The module stores customer information such as name, mobile number, email address, location, order history, and feedback.

Authorized employees can add new customers, update existing information, search for customers, and view customer profiles.

Maintaining customer history helps employees understand previous interactions and provide better service.

Functions

Add customer

Edit customer

Delete customer

Search customer

View customer profile

View order history

Store feedback

PRODUCT MANAGEMENT

The Product Management module allows TheChaiShop&Co to maintain information about products and menu items.

Product information may include product name, category, price, availability, and description.

Employees can add new products, update prices, modify product information, and change product availability.

This module helps maintain accurate product information throughout the CRM application.

Example Products

Tea

Coffee

Masala Tea

Green Tea

Milk Tea

Snacks

Special Beverage

ORDER MANAGEMENT

Order Management helps employees record and monitor customer orders.

When a customer places an order, the required product, quantity, customer information, and order details can be entered into the system.

The application can generate an order record and associate it with the customer profile.

Order history can later be used to understand customer purchasing patterns.

Order Information

Order ID

Customer ID

Product

Quantity

Price

Total Amount

Order Date

Order Status

SALES MANAGEMENT

The Sales Management module helps track the sales activities of TheChaiShop&Co.

The system can calculate total sales based on order information. Daily, weekly, monthly, and yearly sales reports can be generated.

Sales information can help management understand business performance and identify frequently ordered products.

Main Functions

Record sales

Calculate total amount

Track orders

Generate sales reports

Monitor product performance

View sales history

FEEDBACK MANAGEMENT

Customer feedback is an important part of CRM.

The Feedback Management module allows customers' opinions, suggestions, and service-related comments to be recorded.

Employees can review feedback and identify areas that require improvement.

Feedback can also help the business understand customer satisfaction and improve products or services.

Feedback Information

Customer Name

Order ID

Rating

Comments

Date

Feedback Status

CUSTOMER SUPPORT

Customer Support allows employees to manage customer questions, complaints, and service requests.

Each customer request can be recorded and assigned a status such as Open, In Progress, or Resolved.

This provides a systematic way of monitoring customer issues.

Benefits

Faster response

Complaint tracking

Request history

Better communication

Improved service management

REPORT MANAGEMENT

Report Management provides useful information about customers, orders, sales, products, and feedback.

Reports can be generated based on selected dates or categories.

Types of Reports

Customer Report

Product Report

Order Report

Sales Report

Feedback Report

Monthly Performance Report

Reports help management understand business activities and make informed operational decisions.

Status

Order status

INPUT DESIGN

Input design describes how information is entered into the CRM application.

The application should provide simple and user-friendly forms.

Customer Form

Customer Name

Mobile Number

Email

Address

Submit Button

Reset Button

Product Form

Product Name

Category

Price

Availability

Save Button

Order Form

Customer

Product

Quantity

Total Amount

Order Status

Proper validation should be used to reduce incorrect data entry.

OUTPUT DESIGN

The output section displays information processed by the CRM application.

A dashboard can provide a quick summary of important business information.

Dashboard Components

Total Customers

Total Products

Total Orders

Total Sales

Pending Orders

Customer Feedback

Recent Orders

Example:

| **CRM DASHBOARD** |

| Customers | Products | Orders | Sales|

| 250 | 35 | 420 | ₹... |

| **Recent Orders** |

| Order ID | Customer | Amount | Status|

SECURITY FEATURES

Security is important because the CRM application contains customer and business information.

Security Measures

Username and password authentication

Role-based access

Input validation

Secure database access

Session management

Logout facility

Regular data backup

Testing

Testing ensures that the application performs according to requirements.

Different modules such as login, customer management, product management, order management, and reports should be tested individually and together.

IMPLEMENTATION AND RESULTS

The CRM application is implemented by combining the frontend, backend, and database components.

The frontend provides user-friendly screens for entering and viewing information. The backend processes requests and performs application logic. The database stores the required information.

After implementation, users can log into the applicatio

User Story:

As a sales representative at TheChaiShop&Co, I want to efficiently manage customer relationships and streamline sales processes using our CRM application.

I want to easily access and update employer details, as well as distinguish between online and offline customer records using record types, allowing for personalized interactions.

Additionally, I need the application to automate sales calculations, such as order quantity and total bill amount, to ensure accurate and efficient transactions.

Moreover, I require the ability to generate insightful reports and dashboards to summarize and analyze sales data effectively, aiding in decision-making and strategy development.

Lastly, I would like the application to automate email notifications to customers on their birthdays, informing them of special offers tailored to celebrate their special day, enhancing customer engagement and loyalty.

1. INTRODUCTION

1.1 Project Overview :

The project “A CRM Application for TheChaiShop&Co” focuses on developing a Salesforce-based Customer Relationship Management (CRM) system to manage customer, employer, and enterprise accounts efficiently. The system automates sales processes, maintains customer records, generates reports, and improves customer engagement through automated notifications.

The project user story and objectives are defined in the initial section of the document

1.2 Purpose :

The purpose of this project is to:

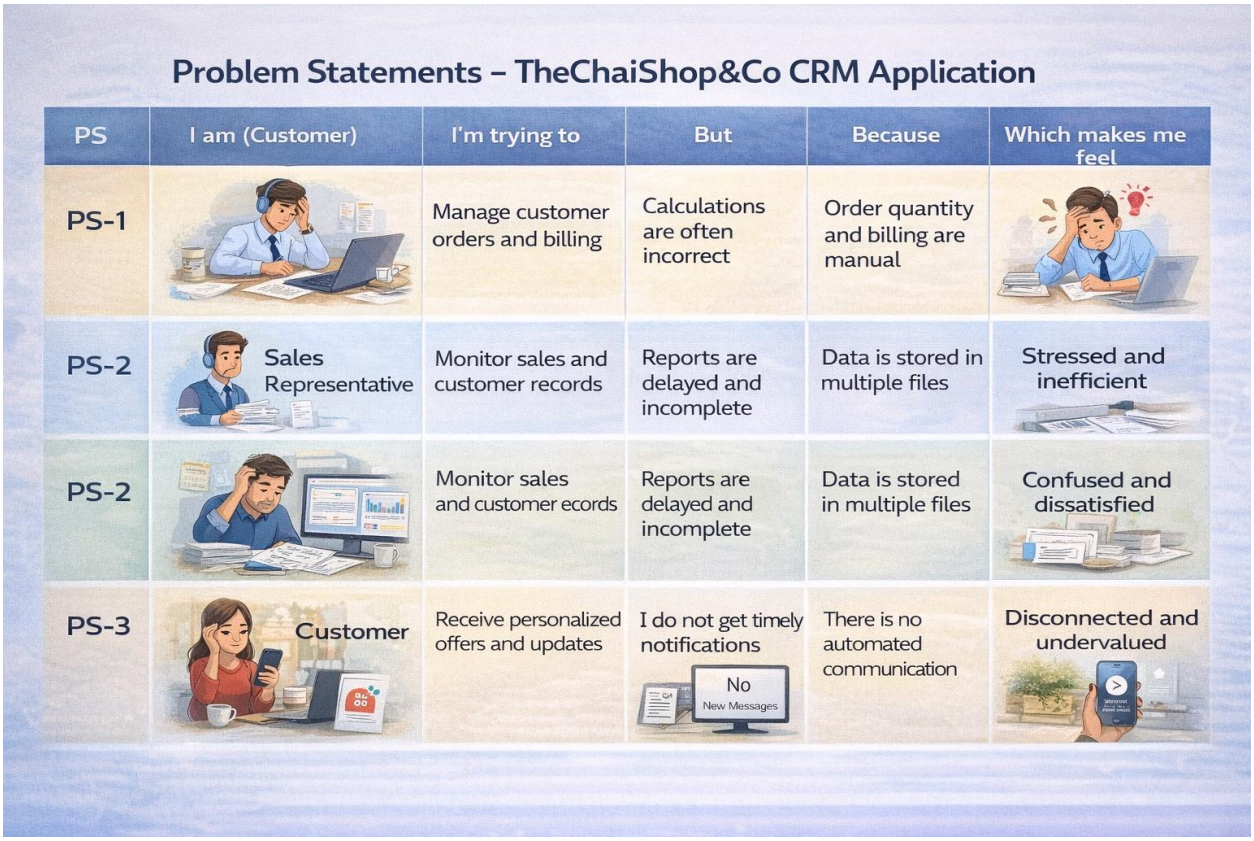

- Streamline customer relationship management
- Automate billing and order calculations
- Improve data accuracy
- Enable data-driven decision-making
- Enhance customer engagement through email automation

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS	I am (Customer)	I’m trying to	But	Because	Which makes me feel

PS-1	Sales Representative	Manage customer orders and billing	Calculations are often incorrect	Order quantity and billing are manual	Stressed and inefficient
PS-2	Store Manager	Monitor sales and customer records	Reports are delayed and incomplete	Data is stored in multiple files	Confused and dissatisfied
PS-3	Customer	Receive personalized offers and updates	I do not get timely notifications	There is no automated communication	Disconnected and undervalued

2.2 **Empathy Map Canvas**

Target Users

- Sales Representatives
- Managers
- System Administrators
- Business Analysts

Empathy Analysis

Aspect	Description
Think & Feel	Need accurate customer data and reports
Hear	Feedback from management
See	Multiple registers and spreadsheets
Enter data manually	
Pain	Errors, delays, data loss

Gain Automation, fast reports

2.3 Brainstorming

Brainstormed Ideas

- Manual CRM system
- Excel-based management
- Web-based CRM
- Salesforce-based CRM
- Automated email system

Selected Idea:

Salesforce-based CRM Application for TheChaiShop&Co..

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Journey Stages:

- Login
- Access CRM Application
- Enter Customer Data
- Generate Orders
- Calculate Bills
- View Reports
- Decision Making

3.2 Solution Requirements

Functional Requirements

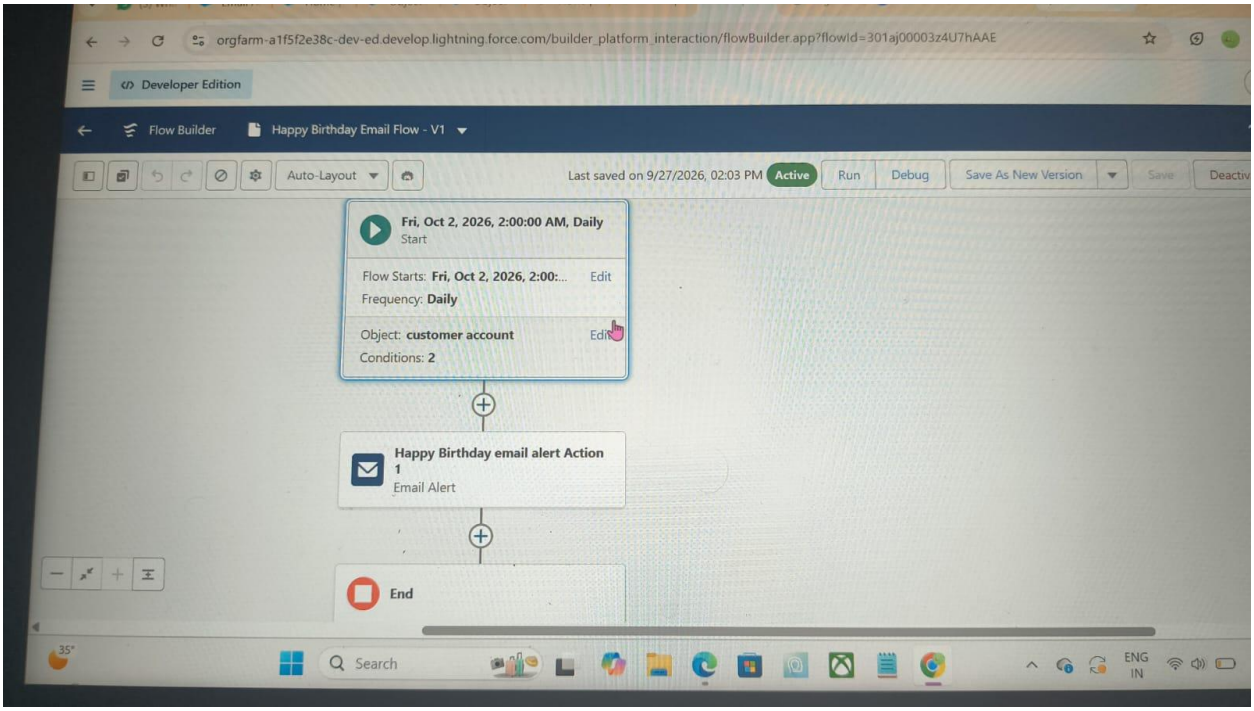

FR No	Requirement
FR-1	User Login
FR-2	Object Creation

FR-3 Data Entry

FR-4 Billing Automation

FR-5 Report Generation

FR-6 Email Automation

Non-Functional Requirements

NFR-1: Usability

The system should be easy to use for sales representatives, managers, administrators, and analysts without requiring technical training.

Requirements :

- Simple and intuitive user interface
- Clear navigation menus
- Easy-to-understand forms
- User-friendly dashboards

Example:

A new sales employee should be able to log in, enter customer details, and generate orders within a few minutes without help.

Salesforce Lightning UI provides drag-and-drop features and easy navigation.

NFR-2: Security

The system must protect customer and business data from unauthorized access.

Requirements:

- Role-based access control
- Secure login authentication

- Encrypted data storage
- Data backup and recovery

Examples:

- Profiles and permission sets
- Object-level and field-level security
- Restricted billing access
- Secure login and password policies

NFR-3: Reliability

The CRM system should work correctly at all times and store data accurately without loss.

Requirements:

- Automatic data saving
- Regular system backups
- Error handling mechanisms

- Stable cloud environment

Example :

If a user enters order data and the internet disconnects, the system should save the information and restore it later.

Salesforce cloud ensures automatic backups.

NFR-4: Performance

The system should respond quickly and handle large amounts of data efficiently.

Requirements:

- Fast page loading
- Quick report generation
- Smooth dashboard rendering
- Minimal delay

Example: When a manager generates monthly sales reports for hundreds of customers, the report should load within 2–3 seconds.

Optimized queries and caching improve speed.

NFR-5: Availability

The system should be accessible whenever required.

Requirements:

- 24/7 system availability
- Minimal downtime
- Cloud-based hosting
- Disaster recovery

Example: Managers should be able to access the CRM system during peak business hours, weekends, or late nights.

Salesforce cloud provides high uptime.

NFR-6: Scalability

The system should support business growth without affecting performance.

Requirements:

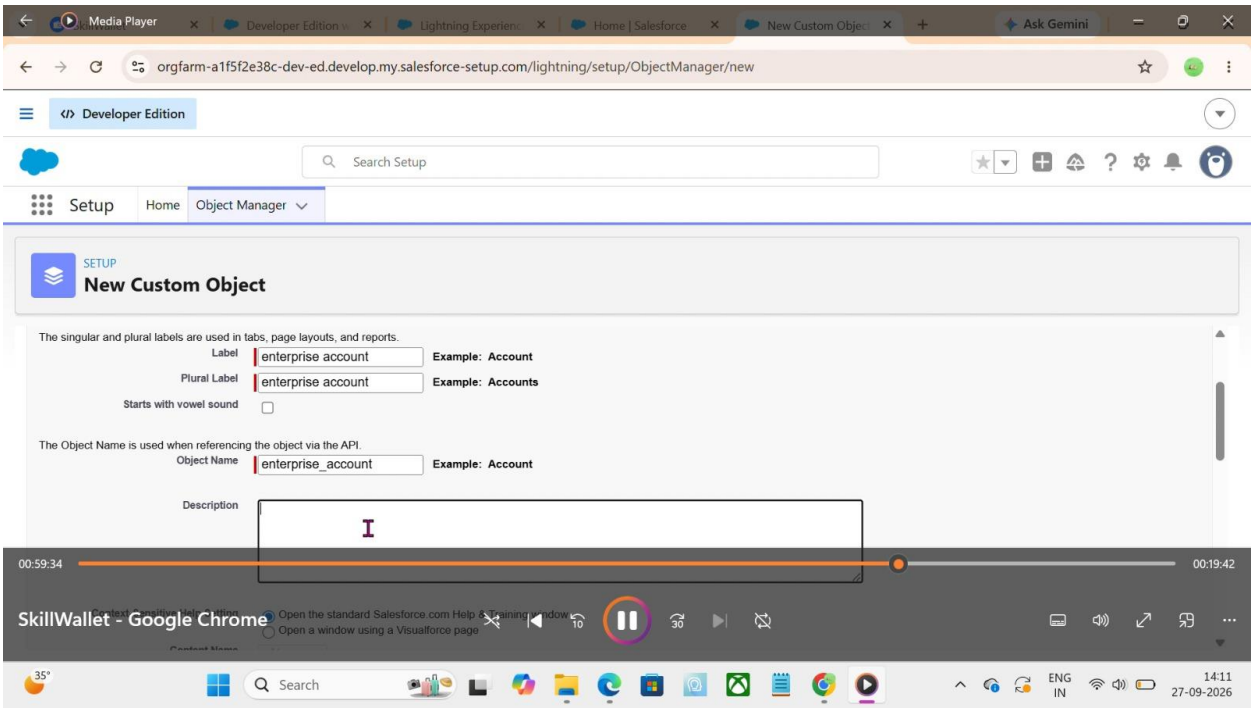

- Ability to handle more users
- Support increasing customer data
- Expandable storage
- Maintain system speed

Example: If TheChaiShop&Co expands to multiple branches, the CRM system should support thousands of customers without slowing down.

Salesforce infrastructure automatically scales.

3.3 **Data Flow Diagram**

User → Salesforce UI → Custom Objects → Validation Rules → Flows → Reports → Dashboards.

3.4 Technology Stack

Layer	Technology
Frontend	Salesforce Lightning
Database	Salesforce Cloud
Automation	Flows
Backend	Salesforce Platform
Analytics	Reports & Dashboards

4. PROJECT DESIGN PHASE

4.1 **Problem–Solution Fit**

The CRM system replaces manual records with automated data management. Cloud storage prevents data loss, dashboards improve analysis, and real-time reports eliminate delays. This ensures accurate and timely business insights generation.

4.2 **Proposed Solution**

Functional Requirements

Parameter Description

User Login & Authentication Allows authorized users to securely log in to the CRM system using valid credentials.

Customer Record Management Enables users to create, view, update, and delete customer details such as name, contact number, and address.

Employer & Enterprise Management Allows management of employer and enterprise account information for business operations.

Order Management Supports creation and tracking of customer orders, including order quantity and product details.

Automated Billing System Automatically calculates total bill amount using formula fields based on order quantity and pricing.

Validation Rules Ensures accurate data entry by validating fields such as phone number, PAN, and Aadhaar.

Record Types & Page Layouts Provides different record types and layouts for various customer and enterprise categories.

Global Picklists Maintains standardized values for fields such as product type, category, and status.

Email Notification System Sends automated emails to customers for birthdays, offers, and order confirmations.

Workflow & Flow Automation Automates tasks such as updating records and triggering alerts using Salesforce Flows.

Report Generation Generates detailed reports on sales, customers, and enterprise performance.

Dashboard Visualization Displays real-time analytics through interactive dashboards and charts.

Data Backup & Recovery Ensures secure storage and recovery of business data in the Salesforce cloud.

User Role Management Controls system access using profiles and permission sets for different users.

4.3 **Solution Architecture**

Architecture Layers

1. **Presentation Layer –** Lightning UI

2. **Application Layer** – Flows and Logic

3. **Data Layer –** Custom Objects

4. **Analytics Layer** – Reports and Dashboards

This layered architecture ensures modularity, scalability, and maintainability.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

5.2

- The project followed an Agile-based development approach with defined milestones and sprints.

- A Salesforce Developer account was created to set up the development environment.

- Custom objects were designed to store customer, employer, and enterprise data.

- Custom tabs and a Lightning Application were developed for easy system navigation.

- Fields, relationships, and global picklists were configured to ensure data consistency.

- Page layouts and record types were created based on user roles and customer categories.

- Validation rules were implemented to prevent incorrect data entry.

- Email templates and automated flows were developed for customer notifications.

- Reports and dashboards were created for performance monitoring and analysis.

- Regular sprint reviews and testing were conducted to track progress and resolve issues.

- The project was completed within the planned timeline through systematic scheduling.

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint Functional Requirement (Epic) User Story Number User Story / Task Story Points Priority Team Members

Sprint-1 Developer Setup USN-1 As an admin, I want to create a Salesforce developer account so that I can configure and deploy the TheChaiShop&Co CRM application. 1 High Member1

Sprint-1 Data Modeling USN-2 As an admin, I want to create Customer, Employer, and Enterprise objects so that business data can be stored and managed systematically. 3 High Member2

Sprint-2 Data Modeling USN-3 As a user, I want separate tabs for each object so that I can easily navigate and manage CRM records within the application. 3 High Member3

Sprint-2 Data Modeling USN-4 As a manager, I want a dedicated Lightning App so that all CRM operations are accessible from a single dashboard. 3 High Member4

Sprint-2 Data Modeling USN-5 As an admin, I want to create customer and order fields so that complete sales and billing details can be captured accurately. 5 Medium Member1

Sprint-2 Data Modeling USN-6 As a user, I want customized page layouts for different record types so that only relevant information is displayed during data entry 5 High Member2

Sprint-2 Data Modeling USN-7 As a manager, I want separate record types for Retail and Enterprise customers so that different business categories can be managed efficiently.

5 Medium Member3

Sprint-3 Automation USN-8 As a system, I want to validate customer details and order inputs so that incorrect data entries are prevented. 3 High Member4

Sprint-3 Automation USN-9 As a system, I want automated flows to send email notifications so that customers receive timely updates and offers. 5 High Member1

Sprint-4 Automation USN-10 As a system, I want to automatically calculate billing amounts so that invoices are generated without manual effort. 5 High Member2

Sprint-5 Reports USN-11 As a manager, I want sales and customer reports so that I can monitor business performance and make informed decisions. 4 High Member3

Sprint-6 Dashboards USN-12 As a manager, I want visual dashboards so that I can quickly analyze sales, customers, and enterprise performance. 4 Medium Member4

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022		
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022		
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022		

6. Project Development Phase:

Project Flow

Milestone 1 : Creation of developer account

Milestone 2 : Object Creation

Milestone 3 : Tabs

Milestone 4 : The Lightning App

Milestone 5 : Global Picklist

Milestone 6 : Fields and Relationships

Milestone 7 : Creation of Page Layout

Milestone 8 : Creation of Record Types

Milestone 9 : Validation rules

Milestone 10 : Email Templates

Milestone 11 : Flows

Milestone 12 : Reports and Dashboards

Milestone 13 : Conclusion

What you'll learn

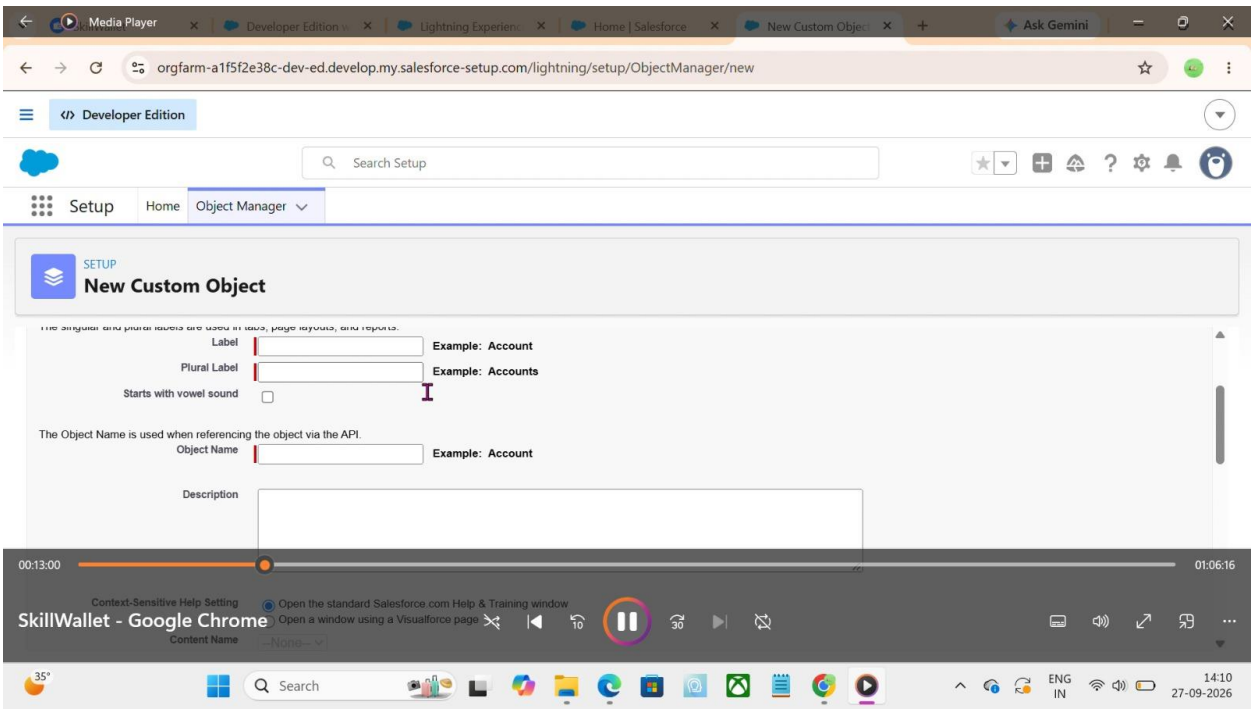

1. Real Time Salesforce Project
2. Standard and Custom objects
3. Picklist Value sets
4. Types of Fields & their relationships.

5. Page Layouts

6. Record Types

7. Validation Rules

8. Email Templates

9. Flows

10. Reports and Dashboards.

Implementation

Milestone 1 – Salesforce developer account creation :

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

1. Go to https://developer.salesforce.com/signup

2. On the sign up form, enter the following details :

    1) First name & Last name

    2) Email

    3) Role : Developer

    4) Company : College or Company Name

    5) County : India

6) Postal Code : pin code

7) Username : should be a combination of your name and company

This need not be an actual email id, you can give anything in that format : username@organization.com

Click on sign me up after filling these.

Activity 2: **Account Activation :**

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

2. Click on Verify Account.

3. Give a password and answer a security question and click on change password.

4. Then you will redirect to your salesforce setup page.

Milestone 2 – Objects

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.

2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.

3. On the Object Manager page, click Create | Custom Object

Activity 1 : Employer Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- **Label** : Employer Account

- **Plural Label** : Employer Accounts

- Enter Record Name Label and Format

  : Employer Account Name

Data Type : Text

- In Optional features : check the boxes for Allow Reports | Allow Activities | Track Field History.

- Search Status : check the box for Allow Search.

- Save

Activity 2 : Customer Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- **Label** : Customer Account

- **Plural Label** : Customer Accounts

- Enter Record Name Label and Format

  Record Name : Customer Account Name

Data Type : Text

- In Optional features : check the boxes for Allow Reports | Allow Activities | Track Field History.

- Search Status : check the box for Allow Search.

- Save

Activity 3 : Enterprise Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- Label : Enterprise Account

- Plural Label : Enterprise Accounts

- Enter Record Name Label and Format

  Record Name : Enterprise Account Name

Data Type : Text

- In Optional features : check the boxes for Allow Reports | Allow Activities | Track Field History.

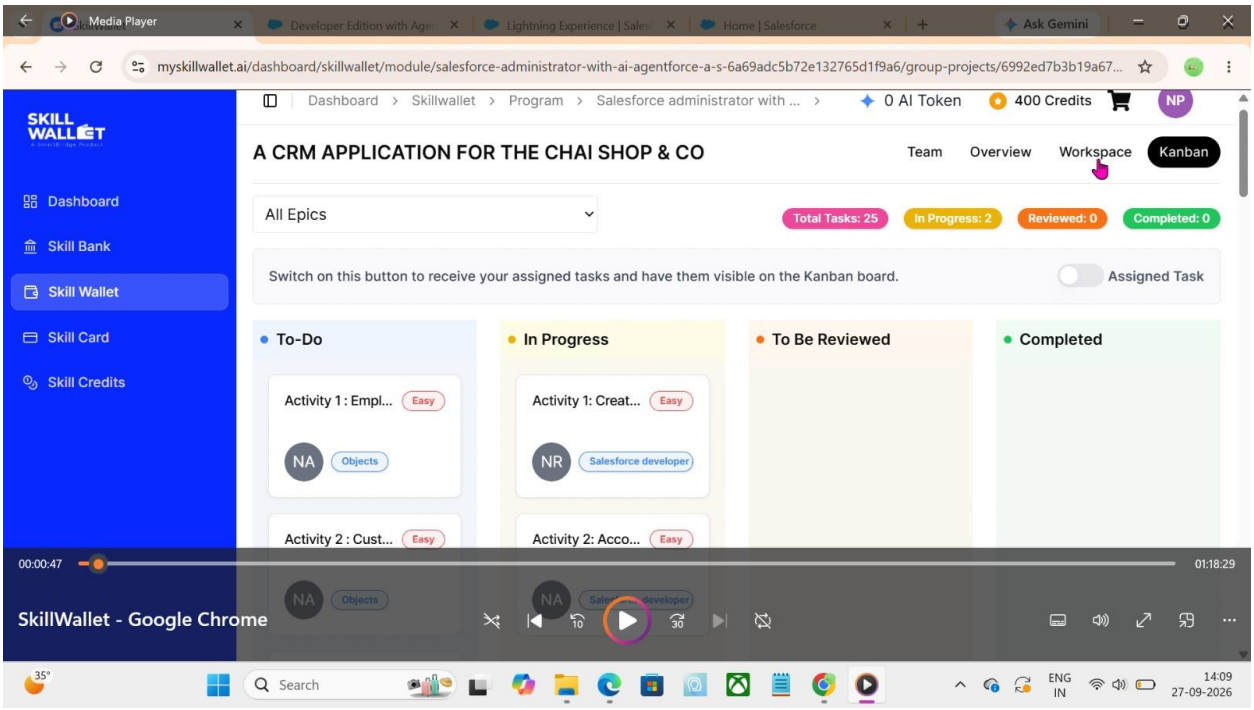

- Search Status : check the box for Allow Search.

- Save

Milestone 3 – Tabs

Activity 1 : Custom tabs creation

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)

2. Select Object(Employer Accounts) → Select the tab style → Next (Add to profiles page) keep it as default → Next (Add to Custom App) uncheck the include tab .

3. Make sure that the Append tab to users' existing personal customizations is checked.

4. Click save.

5. Repeat the same steps for Customer Accounts and Enterprise Accounts.

Milestone 4 – The Lightning App

Activity 1 : Create a lightning app

1. Go to setup page → search "app manager" in quick find → select "app manager" → click on New lightning App.

2. Fill the app name in app details and branding as follow

App Name : TheChaiShop&Co

Developer Name : Auto Populates

Add image optional (if you want to give any image you can otherwise not mandatory) – Add Primary color Hex or leave it to default.

Then click Next.

3. **In App options**

Navigation style : Standard navigation

Setup experience : setup

Supporters form factors : Desktop and phone

Then click Next

4. **In Utility items**

Utility Bar alignment : Default

Then click Next.

5. **Navigation items**

Select the created Custom Objects and required standard objects

- Customer Accounts

Employer Accounts

Enterprise Accounts

Reports

Dashboards

6. To Add User Profiles : System Administrator

7. Click Save & Finish.

Milestone 5 : Global Picklist

Activity 1 : Create Global PIcklist

1. In Quick find box search for : Picklist value sets and click New.

- Label : Gender

Name : Auto Populates

Values : Male

Female

Others

Click Save & New.

2. Create three more Global picklists following the same steps.

- Label : Items

Name : Auto populates

Values : Platinum Tea Powder

Double Delight Tea Powder

Super Dust Tea Powder

Osmania Biscuits (Value Pack)

Osmania Biscuits (Premium Pack)

Dry Fruit Biscuits

Fruit Biscuits

Salt Biscuits

Multigrain Biscuits

Ragi Biscuits

Double Choco Chip Cookies

Butter Almond Cookies

Milestone 6 : Fields & Relationships

Activity 1 : Create Custom fields for Employer Account

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.

2. Click the Object Manager tab. If you don’t see it, enter Object Manager in the Quick Find box.

3. From the object manager page, In the Quick Find box, Search for the custom object you just created : Employer Account

4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.

5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn’t already exist.

6. Next, choose a data type as Text. Choosing a data type helps you format the field input.

7. Click on next.

8. Data Type : Text

Field Label: First Name

Field Name : Auto Populates

Length : 25

Required : Check the box

Click on Next → Next → Save and new.

. SYSTEM WORKFLOW

The basic workflow of the CRM application is:

Customer Registration → Customer Login/Identification → Product Selection → Order Placement → Order Record → Feedback → Customer Analysis → Offers/Loyalty → Reports

This workflow helps the shop maintain continuous interaction with customers.

8. BENEFITS

The CRM application provides several benefits to The Chai Shop & Co.:

Reduces manual work.

Provides organized customer information.

Improves customer service.

Makes order management easier.

Helps understand customer preferences.

Supports loyalty programs.

Makes feedback management easier.

Provides useful business reports.

Improves communication with customers.

Helps build long-term customer relationships.

9. CONCLUSION

The CRM Application for The Chai Shop & Co. Provides an effective way to manage customer relationships and business activities. By maintaining customer, product, order, feedback, and sales information in one system, the shop can improve its daily operations.

The application can help the business understand its customers better and provide improved services. It can also support customer loyalty and business growth. Thus, the proposed CRM system can act as a useful digital solution for managing the customer relationship activities of The Chai Shop & Co

THANK YOU
